ELMo: Embeddings from Language Models

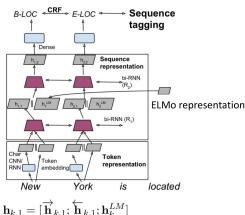

- Idea: train a large language model (LM) with a recurrent neural network and use its hidden states as "contextualized word embeddings" [Peters et al., 2018].
- ELMO is bidirectional LM with 2 biLSTM layers and around 100 million parameters.
- Uses character CNN to build initial word representation (only)
- 2048 char n-gram filters and 2 highway layers, 512 dim projection
- User 4096 dim hidden/cell LSTM states with 512 dim projections to next input
- Uses a residual connection
- Parameters of token input and output (softmax) are tied

ELMo: Embeddings from Language Models

ELMo: Use with a task

- First run biLM to get representations for each word
- Then let (whatever) end-task model use them
- Freeze weights of ELMo for purposes of supervised model
- Concatenate ELMo weights into task-specific model

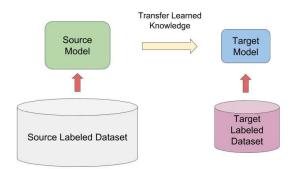

ELMo: Results

Name	Description	Year	F1
ELMo	ELMo in BiLSTM	2018	92.22
TagLM Peters	LSTM BiLM in BiLSTM tagger	2017	91.93
Ma + Hovy	BiLSTM + char CNN + CRF layer	2016	91.21
Tagger Peters	BiLSTM + char CNN + CRF layer	CNN + CRF layer 2017	
Ratinov + Roth	Categorical CRF+Wikipeda+word cls	2009	90.80
Finkel et al.	Categorical feature CRF	2005	86.86
IBM Florian	Linear/softmax/TBL/HMM ensemble, gazettes++	2003	88.76
Stanford	MEMM softmax markov model	2003	86.07

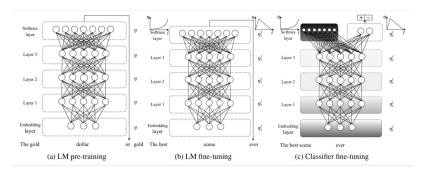

ULMfit

- Howard and Ruder (2018) Universal Language Model Fine-tuning for Text Classification [Howard and Ruder, 2018].
- Same general idea of transferring NLM knowledge
- Here applied to text classification

ULMfit

- Train LM on big general domain corpus (use biLM)
- Tune LM on target task data
- Fine-tune as classifier on target task

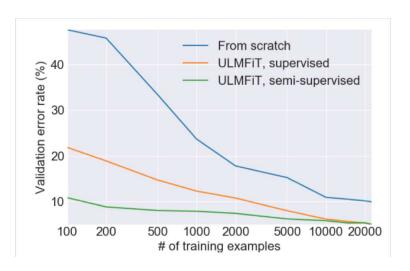

ULMfit emphases

- Use reasonable-size "1 GPU" language model not really huge one
- A lot of care in LM fine-tuning
- Different per-layer learning rates
- Slanted triangular learning rate (STLR) schedule
- Gradual layer unfreezing and STLR when learning classifier
- Classify using concatenation [h_T,maxpool(h),meanpool(h)]

Model	Test	Model	Test
CoVe (McCann et al., 2017)	8.2	CoVe (McCann et al., 2017)	4.2
chang, 2016)	5.9	U TBCNN (Mou et al., 2015)	4.0
Virtual (Miyato et al., 2016)	5.9	LSTM-CNN (Zhou et al., 2016)	3.9
ULMFiT (ours)	4.6	ULMFiT (ours)	3.6

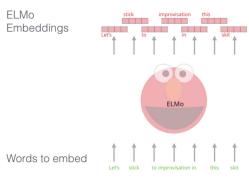

Text classifier error rates

ULMfit transfer learning

BERT

 Idea: train a large language model with a recurrent neural network and use its hidden states as "contextualized word embeddings" [Peters et al., 2018].

Questions?

Thanks for your Attention!
